Smart Sounding Scale EP Honesty

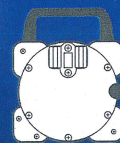

SEMCO LTD.

Efficient measuring with SEMCO Smart Sounding!

A sensor installed at the end of a sounding measuring tape enables the reading of ullage more accurately in less time.

When the sensor reaches the surface of the liquid, an alarm is activated with a lamp and a buzzer. The reading on the body at the time of alarm activation is the ullage of the measured liquid.

SMART SOUNDING

FEATURES

- Reading of ullage upon landing of the sensor on any liquid.
- Sensing the actual liquid surface, not the floating bubbles.
- Requires only a 9-volt battery.
- Approved by Class NK.

BENEFITS

- Saves measuring time significantly.
- Measures accurately as the sensor does not reflect the "cappuccino bunker" (bubbles on the liquid surface) during bunkering.
- Can measure not only fuel oil but also colorless liquids such as ballast water and bilge.
- Portable and easy to handle.

PECIFICATIONS

Sounding Scale Honesty	
Material (sensor)	SUS304
Tape length	30m
Battery	9 volts
Tape resolution	2 mm (JIS First Class)
Sensor dimensions	φ29 × 176 mm

※ This product is not intrinsic safety.
